0

Define $f: \mathbb{R}^n \to \mathbb{R}$ as $f(x) = b^T x + x^T A x$

a) what is the gradient and Hersion of for wiret u?

Sol) Gradient
$$\nabla f(n) = \frac{\partial f(n)}{\partial (n)}$$

$$\nabla f(x) = \frac{\partial}{\partial x} (b^{T}x + x^{T}Ax)$$

$$= \frac{\partial b^{T} x}{\partial x} \Rightarrow \begin{bmatrix} \frac{\partial b^{T} x}{x_{1}} \\ \frac{\partial b^{T} x}{x_{L}} \\ \vdots \\ \frac{\partial b^{T} x}{x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{N}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{1}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{1}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix} \frac{\partial b^{T} x}{\partial x_{2}} \\ \frac{\partial b^{T} x}{\partial x_{2}} \end{bmatrix} = \frac{\partial b^{T} x}{\partial x_{2}} \begin{bmatrix}$$

$$\Rightarrow$$
 $\begin{bmatrix} b_1 \\ \vdots \\ b_n \end{bmatrix} = b$

$$\Rightarrow X^{T}AX = \begin{bmatrix} x_{1}, ..., x_{n} \end{bmatrix} \begin{bmatrix} a_{11} ..., a_{1n} \\ \vdots \\ a_{n1} & a_{nn} \end{bmatrix} \begin{bmatrix} x_{1} \\ \vdots \\ x_{n} \end{bmatrix}$$

$$= \left[\left(a_{11} x_1 + \cdots + a_{n_1} x_n^{n_1} \right) - \cdots \left(a_{1n_1} x_1 + \cdots + a_{n_n} x_n \right) \right] \begin{bmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{bmatrix}$$

$$= \begin{bmatrix} \sum_{i=1}^{n} a_{i1} x_{i} & \cdots & \sum_{i=1}^{n} a_{in}^{n} x_{i} \end{bmatrix} \begin{bmatrix} x_{i} \\ \dot{x}_{in} \end{bmatrix}$$

$$= x_1 \stackrel{n}{\underset{i=1}{\times}} q_{i1} x_i \circ \cdots \circ x_n \stackrel{n}{\underset{i=1}{\times}} q_{in} x_i$$

To compuling the particul derivative we can simplified the equisition of (a: x; + \le x; a: jx;)

manual long trail only one is to have for

=> for simplicity let consider the kth row and do partial derivative

$$\frac{\partial x^T A x}{\partial x_K} = \frac{\partial}{\partial x_K} \sum_{i=1}^{\infty} (a_{ii} x_i^2 + \xi x_i^2 a_{ij} x_j^2)$$

we can re-write as

(onvert Back into matrix from

$$\begin{bmatrix} \frac{2}{3}, \chi_{j} & q_{j} \\ \vdots & \vdots \\ \frac{2}{3}, \chi_{j} & q_{j} \\ \vdots &$$

So
$$\nabla F(x) = b + (A^T + A) \times$$
 avadient

So
$$\nabla F(x) = b + 2Ax$$
 = Gradient when A is

=> Hessian matrix

$$\nabla^2 f(x) = \frac{\partial^2 f(x)}{\partial x \partial x^T}$$

Now we know the kin clement gradient

$$\nabla f(x) = b_{K} + \sum_{j=1}^{n} x_{j} a_{j} x_{j} + \sum_{j=1}^{n} a_{kj} x_{j}$$

so second partial deravitue for km row V f(x) = 0 + 9 K'K + 9KK'

which mean that

$$\nabla^2 f(x) = \begin{bmatrix} a_{11} + a_{11} & a_{21} + a_{12} & \cdots & a_{n1} + a_{1n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{1n} + a_{n1} & \cdots & \vdots \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & & \\ & &$$

b) Derive the first and second order laylor's approximation of far) at x=0, Are these approximation exact

$$f(x) = f(x_0) + \frac{\partial f}{\partial x} \Big|_{x_0} (x - x_0)$$

$$\Rightarrow$$
 $f(x) \otimes f(x_0) + \nabla f \int_{x_0}^{T} (x - x_0)$

$$= 0 + b^T X$$

$$=b^{\mathsf{T}}X$$

and order

$$\Rightarrow \circ + b^{T}X + \frac{1}{2}X^{T}(A+A^{T})X$$

$$\Rightarrow b^{T}x + \frac{1}{2}x^{T}(A+A^{T})x$$

$$=b^{T}X+\frac{1}{2}X^{T}(1A)X$$

 $\Rightarrow b^{T}X + \frac{1}{2}x^{T}(A+A^{T})x$ are exact Because the function For A is symmetric is quadratic

- e) what are the necessary and sufficient condition for A to be positive definite? -> Jina AERMAN, so the necessary and sufficient conclision for A to be positive definite it -> All the eigen value of A must be yeteten town Positive 1/0 -> XTAX70 for all x Cother tuan - zero vector] -> All upper left determinant must be > 0. of what are the necessary and sufficent condition for A to have full rank
- -> The IAI \$0. { Determinant of A \$0.} Ly All rous are linearly indipendent
- e) If there exist $y \in \mathbb{R}^n$ and $y \neq 0$ such that $A^T y = 0$ then what are the condition on b for AX=b to have solution for x

$$A^T y = 0$$
 : $Y \in NCA^T$)

Ax=b (ATATAGOT

mean b E C(A) · y is perpendicular to b $x(A^{T}y)=0 \Rightarrow [b^{T}y=0]$

Due to the Recont Formulate an ophinization Problem to defermene the minimum sprocery cost to satisfy the Dunition need.

example matrix Nutrition > Y. . Y ... Ym unit price Food V an an azi azz ... azn
